LALIGA MOSAICO

BEYOND THE MATCH CHALLENGE · LALIGA × IGNYTE

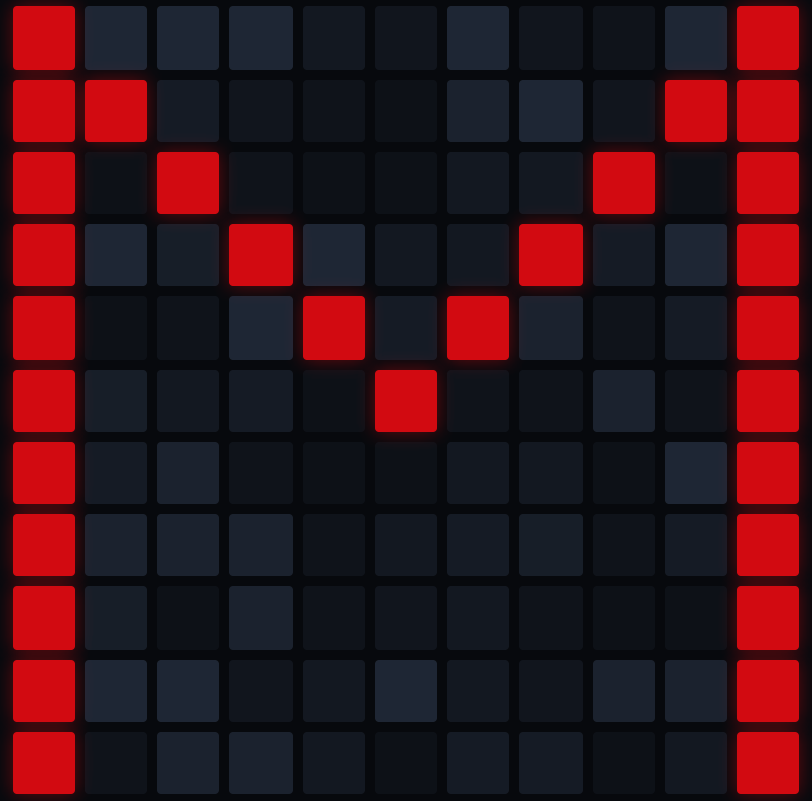

Every fan is a tile.

Together, the picture.

A season-long participation layer. Every call a fan makes adds a tile to a record that is theirs. At full time the stand's calls resolve into one image — and the league gets a live read of the people watching.

IN-MATCH · COMMUNITY · NARRATIVE · EXTENDED

Points only · no wagering · no stakes

12,480 calls · one picture
The Reveal · full time

Product concept & execution plan

October 2026

Football built the world's best 90 minutes. Then it left fans with nothing to do.

Consumption is solved. Participation is not. The second screen is where the next generation already lives — but the league's relationship with them still ends at the final whistle.

- **One-off activations don't compound.** A poll, a giveaway, a matchday stunt — each one starts from zero.
- **No identity, no return.** If nothing carries between matches, Tuesday has no reason to open the app.
- **The brief agrees:** LALIGA asked for a structural asset, not an isolated feature.

90′
of attention per match, already won
The asset is attention, not reach

0
things a fan's opinion changes today
Participation is passive

6 days
between matches with no product
The retention gap

1
relationship to build: LALIGA ↔ fan
Direct, not via a platform

Sources: challenge brief (structural vision); product thesis.

One line: a fan reputation layer that runs all season.

Fans call what happens in the match — predictions, votes, the moment of the night — and earn a public reputation that follows them across matches, clubs and the season. Every call lands as a tile; the season is the mosaic they built. They compete as individuals, as club stands, and as small blocks.

The league gets three assets it cannot buy elsewhere:

- A **fan preference graph** — what the stand expects, moment by moment.
- A **new broadcast metric** — The Heat, argued about on air.
- **Sponsor inventory** attached to genuine attention, not impressions.

In-match participation

Timed Moments and micro-predictions through the ninety.

Structured community

Club stands and blocks with their own standing and status.

Data & narrative

A proprietary Heat index that gives commentators a second storyline.

Extended experience

Missions, arcs and echoes that make Tuesday part of the season.

All four opportunity areas, one loop — not four features.

The loop that makes it structural.

Predict
30–60s micro-calls before and during the match

→

Play
Live moments, votes and parallel challenges

→

Prove
Server-resolved scoring from the official feed

→

Progress
Badges, levels and season rank that persist

→

Belong
Club stand and block leaderboards

Why fans return

Reputation is an asset. Switching costs are emotional, not technical: your standing lives here.

Why the league keeps it

It compounds. Every match adds data, history and a reason to open the app on a quiet Tuesday.

Why it scales

One loop, any club, any language. Local blocks make it feel local while the model stays global.

Points only. No stakes, no odds, no cash-out. Participation is the product — which keeps the experience clear of gambling regulation and keeps the league's voice clean.

What is live at Demo Day — and what is deliberately conceptual.

Live, working now

- Ritual and club identity; the fan enters the night, not a form.
- Vote on real Moments with a **live aggregate tally** and one-vote-per-fan guard.
- Predictions and points; season reputation and rank that persist across matches.
- Global, club and **block** leaderboards — blocks can be created and joined by code.
- Reveal card, EN/ES toggle, installable PWA, offline fallback.
- A real Postgres schema (Neon free tier) with an append-only events table as the source of truth.

Conceptual at this stage

- Official LALIGA SSO and app-tab embedding.
- Live rights-cleared match feed (adapter contract defined).
- Broadcast lower-third and stadium ribbon integrations.
- Sponsor contracts and production ad-serving.
- Full ES/EN/AR localization with RTL.
- Production anti-fraud and anomaly detection.

We chose a narrow, honest prototype: the loop and its evidence are real; the league integrations are scoped, not pretended.

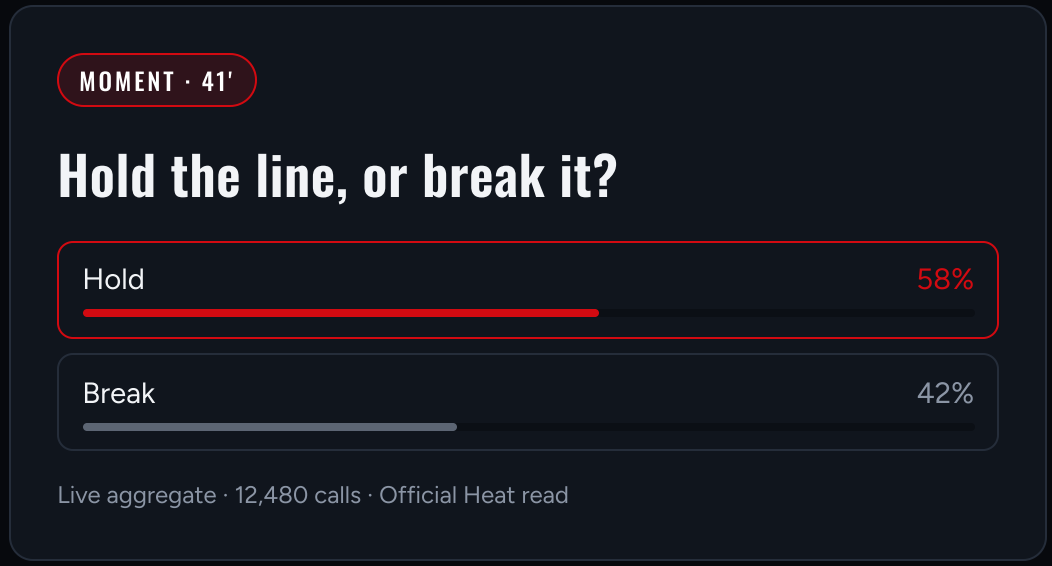

Make the ninety participatory, moment by moment.

A Moment is a timed question tied to the match state: hold the line, who scores next, was that a red? Fans answer in seconds; the stand's answer appears as an aggregate, never as a named user.

4.6
calls per fan per match (model)
Recurring, not a single poll

60s
to first meaningful action
No account wall before value

Timing is the craft: questions land on corners, cards and substitutions, not on a timer.

The Moment
One question tied to match state, open for seconds. Timing is the craft, not a countdown.

The Reveal
At full time the night's calls resolve into one image. Aggregate only, never a name.

The Tile
Every call is a tile in the fan's season record — a reputation you can see, not a streak badge.

Rank is earned. Narrative is shared.

Blocks

A bar, a group chat, a city. Join by code; the block has its own standing. Local identity inside a global league.

Season reputation

Levels and titles carry across matches. Rank is never bought, never gambled — only earned by showing up.

The Reveal card

After the whistle, a shareable record of what the stand called. The league's voice leaving the app.

The Heat index

A new, proprietary number: temperature, pressure and how settled the stand is, blended into one figure. Commentators can quote it, argue with it, and build a second storyline around it — free of charge, every match.

This is the data-narrative layer: not more stats about players, but a live read of the people watching.

Take your tile. The Reveal card is the share unit: a picture of the stand, not a brag about one fan.

It lives inside LALIGA — not beside it.

App

A tab in the official LALIGA app. Existing SSO — one identity, rank travels with the fan. No new account.

Data

A feed adapter maps rights-cleared match events into the Mosaico contract. The prototype already runs on that shape with a mock feed.

Broadcast

The Heat as a clean lower-third. Aggregate only; never a named fan. One line partners can take.

Commercial

Sponsored moments and blocks, with the league desk owning the question and the result.

Stadium

The same call on the ribbon at half-time. People in the ground and at home are one stand.

Rollout

One club, one matchday pilot → league-wide ES → LATAM → MENA (AR/RTL). Each step reuses the same loop.

What we need from LALIGA: feed access for one pilot club, SSO, a brand review, and a matchday to prove the loop in public.

One north star, measured from real events.

North star: Weekly Active Predictors (WAP) per matchday — fans who make at least one call in a rolling seven-day window. It rewards recurrence, not reach.

KPI	MODEL	HOW THE PROTOTYPE EVIDENCES IT
Matchday participation rate	8–15%	Voters ÷ matchday reach, from one event row per vote.
Calls per fan per match	4.6	Vote + forecast events grouped by fan and match.
D7 return, ritual cohort	55–70%	Cohort of fans who completed the ritual, tracked by fan id.
Block join rate	12%	Join events ÷ active fans.
Second-screen attach	3–6%	Broadcast QR/deep-link opens reconciled to matchday reach.
Reveal cards shared	18%	Share events ÷ Reveal views.

Proof at Demo Day: open /board — event counts, dedupe and leaderboards are computed from the same rows these KPIs read. Nothing here is a screenshot.

Figures are modelled assumptions, clearly labelled; every prototype action writes an event, so each row becomes measurable in the pilot. A/B design: ritual-first vs value-first onboarding.

09 · ECONOMIC SUSTAINABILITY

Sponsorship attached to attention, not impressions.

Presented moments

One curated Moment per match carries a named partner. They never set the question or touch the result.

Block sponsorship

Clubs, bars and cities host blocks — a second, local line of partnership with measurable membership.

Season partner

A presenting partner across the season arc, leaderboards and the Reveal card.

Why the cost base is honest

Built to prove itself on free tiers: scale-to-zero Postgres, static/edge delivery, one append-only table. Infrastructure cost stays near zero until usage earns the right to spend.

"No cost until proven" is the operating model, not a slide promise.

Guardrails

- No wagering, odds, stakes or cash-out.
- Sponsor never influences questions or results.
- Rank cannot be bought — protecting the product's credibility.
- Ad load capped so the night never feels like inventory.

Revenue order: prove attention → sell the moment → renew on measured recall. No inventory is sold before the loop works.

What could go wrong — and how we close it.

RISK	MITIGATION
Rights & IP	Only rights-cleared official feeds; league desk writes questions; no club marks without clearance; aggregate-only broadcast.
Data protection	GDPR + UAE PDPL. Pseudonymous fan id, data minimisation, age gate, defined retention, aggregate-only outputs.
Regulation	Points-only, no stakes or odds, no cash-out; clear T&Cs; local counsel per market before launch.
Scale	Edge delivery, event-driven writes, Postgres + cache, load model for matchday peaks, graceful offline fallback.
Integrity	Server-side scoring, one vote per fan per moment, rate limits, anomaly detection; no client-trusted points.
Dependency	Feed adapter contract with a mock fallback; pilot scoped to one club so the loop is proven before league-wide rollout.

Prove the loop in 90 days. Then scale the season.

0–30 days

Pilot with one club: official feed, SSO, live moments on one matchday. Success = WAP and D7 baselines established.

30–90 days

League-wide matchdays, blocks, sponsor pilot, broadcast lower-third. Success = recurring participation and first sponsor renewal.

Season 2

Season partner, LATAM and MENA rollout, stadium ribbon, deeper narrative metrics.

The ask

- One club and one matchday to run the pilot.
- Feed access and SSO for that pilot.
- A brand review before public launch.

Team

Jones Kapedo — product & engineering. One builder, one thesis, and a working prototype: the loop is not a mock-up.

Built for the Beyond The Match Challenge.

Football already has 90 minutes of attention. Give fans something to do with it — and a reason to come back on Tuesday.
